(a)
Accumulated firebrands [pcs/m^2]
Downwind distance [m]
transport impulse
transport impulse reference
immediate ignition
immediate ignition reference
(b)
Time of arrival [s]
Downwind distance [m]
transport impulse
immediate ignition
$T = (x - x_0)/U$
(c)
Leading-edge position [m]
Time [s]
transport impulse
immediate ignition
$x_{LE} = x_0 + Ut$
(d)
Leading-edge ROS [m/s]
Time [s]
transport impulse
immediate ignition
$ROS = U$
